

### **3 DAY IMAGERY ANALYSIS COURSE**

This course has been designed exclusively for analysts that are required to use, or have an understanding of, the capabilities of imagery in the course of their duties. Delegates will be trained by experienced former military intelligence analysts that have used imagery in real operations including supporting police investigations such as counter terrorist operations, large area searches for missing persons, serious crime investigations and providing support to VIP events.

Delegates will gain an insight into effective use of imagery that can be a force multiplier in the investigation cycle. Delegates can then confidently task the collection of imagery from surveillance teams or the Force Air Support Unit to provide a more effective product without the need to re-task.

With sources of imagery becoming more available for investigations such as CCTV, trained staff can better support investigations more effectively thereby helping to speed up the investigation process.

#### Course Content:

- Introduction to imagery analysis. Understand the fundamental differences between image types and understand the role of imagery to aid investigations
- Advantages and disadvantages of imagery when used for analysis
- Introduction to Infra-red imagery
- Application of imagery for Police Intelligence requirements
- Methodology for effective analysis
- Introduction to CCTV analysis
- The Tasking Cycle. How to prepare a request for Imagery collection.
- Understanding mapping and target location
- Image/Map comparison
- Detailed Target Analysis
- Imagery support to large scale public events or disaster management.
- Digital Imagery techniques. Introduction to digital imagery software and manipulation.
- Preparation of imagery for adding to reports.
