

The Research and Intelligence Support Centre, in partnership with Toddington International Inc. is pleased to present:

The Internet for Investigators

Giving you the essential skills to quickly and cost-effectively locate information online

About The Research and Intelligence Support Centre

With over 20 years hands-on experience, RISC specialises in the delivery of professional research and intelligence analysis consulting and training services to law enforcement, government and the business sector.

About Toddington International Inc.

With an unrivalled reputation in the provision of Online Research Training and Internet based Open Source Intelligence (OSINT) Services, Toddington International's innovative training programmes succeed in helping front-line professionals get the critical information they need when they need it, effectively and safely.

Acquiring useful and relevant open source intelligence (OSINT) requires more than just an ability to use the Internet. Many valuable sources of intelligence are unknown and untapped by police investigators who simply "don't know what they don't know" about finding information online.

Finding online databases and hidden web sites that return key information while considering legal and privacy implications is an essential skill for police officers at all levels of rank and experience.

This five-day programme provides instruction on established processes developed over ten years, supported by tips, hints, checklists, examples and case studies that will allow investigators to uncover information often considered unavailable or unreachable.

The course includes:

- Understanding search engine indexing and ranking protocols
- Surface and deep web advanced searching strategies and tools
- How web pages can be hidden from search engines and how to find them
- Forums, discussion boards, newsgroups, mailing lists and live online chat
- Introduction to multimedia search
- Web 2.0 including weblogs, social networks, wikis and feeds
- Protecting your identity and maintaining evidential integrity
- Counterintelligence techniques used by the criminal element
- Web site mapping and archiving - recovering old or lost web pages.
- De-anonymizing web content
- Challenges and skills involved in "finding the person behind the keyboard"
- Introduction to the OSINT Intelligence Analysis process.
- Essential planning, gathering, collating and disseminating techniques

When: July 5-9, 2010

Where: Robinson Executive Conference Centre, Wyboston Lakes, Great North Road, Wyboston, Bedfordshire

Contact: For more information or to reserver your place, contact Jim Devery at the Research and Intelligence Support Centre (contact details below).

Space is very limited and previous courses have sold out quickly. Early registration is recommended to avoid disappointment.
